

Mpeg2Cut2 cuts MPEG 2 files (.m2p, mpg or .VOB)

Open the MPEG2 video with „File/Open“

For a fast navigation use with the mouse with the slider

You will easily learn to use the different „<“ and „>“ files for fast or fine navigation.

IN GD we use to start with the video about 2 sec before the trap opens.

One double file left „<<“ jumps about 2 sec back.

„P“ means play and „°“ stops the playing.

The basic approach is to mark the "FROM" = “[, and "TO" = "]" points of each race that you want to cut and then save that selection to a new file with „Save this Clip“ (Ctrl + T) as raceX.mpg.

Repeat this for each race that you want to save. You can directly upload such files into the GD
